

conscious action

WE **A.I.M** TO CHANGE THE WORLD THAT SURROUNDS US

AVOID the usage of non sustainable and non recycled materials.

IMPROVE the environment where we are integrated.

MITIGATE the CO₂ footprint of our collection.

CHANGING THE WORLD, GIFT BY GIFT

Our collection emerged from the awareness that the use of natural resources cannot continue to be more than the Planet can generate and that interpersonal relationships are the greatest wealth existent to humanity. It is our purpose to change consumption habits, contributing to sustainable development and the quality of life of all the guests on Planet Earth. It is our belief that each of us can make a difference. Therefore, each product is chosen with the utmost care considering the high recyclability of the materials used (minimum 60% in the first year of the company). Our mission, in the upcoming years, is to increase this rate by ensuring the high quality of the products and a long lifespan, thereby increasing durability.

By purchasing our products, the customer will be contributing to the protection of the Planet's resources, as well as promoting better working and living conditions for the individuals and communities involved in the value supply chain.

The packaging design is also one of our concerns and, as such, we are committed to creating innovative solutions that aim to reduce and reuse these same packages, giving them a second life.

CHANGING THE WORLD, TREE BY TREE

We consider that our contribution should go beyond our products and taking into account the importance of forests for sustainable balance, we decided to acquire a 10 ha of forest in the central region of the country, aiming to promote forestry and ecosystem management.

Additionally, and aligned with the philosophy of Voluntary Carbon Markets, we support national projects that aim to minimize our ecological footprint.

CO₂ Footprint Calculation

What you can't measure, you can't improve.

Initially, we will follow a cradle-to-gate product carbon footprint calculation approach, meaning, all emissions from the extraction of materials will be considered.

During the first year of activity, the focus of measuring our impact will be on the following axes:

Knowledge and monitoring of the carbon footprint associated with the different products we have available in our catalogue;

Increase the incorporation of recycled material in the composition of our products.
